RUBBER GRANULATES AND RUBBER POWDER ◆

In the **RUBBER GRANULATES AND RUBBER POWDER** market, our customers appreciate the confidence and reliability of our business relations and identify us as the no. 1 expert taking care of all their sourcing requirements – which in turn allows them to spend more time on their own customers relations.

Our extensive network guarantees continuous supply even at the height of the peak season.

We offer a wide range of industrial rubber and recycled tyre products: **rubber shred, rubber granulate, rubber powder, reclaimed rubber, buffings, EPDM, LFR, TPE** and others.

For our valued customers this means high-quality material at highly competitive prices, the lowest possible transportation costs, expert knowledge on product characteristics and market developments, as well as speedy and trouble-free material deliveries.

MOULDED PRODUCTS ◆

We have first-class partnerships with major producers in the market for **MOULDED PRODUCTS**. eximlink's surfacing systems represent the new generation of rubber surfaces. We are able to adapt to varying customer requirements very quickly, and effectively promote product developments. Applications for these systems range from **leisure** (e.g. playgrounds) and **equestrian industry** (e.g. horseboxes) to **civil engineering** (e.g. sound insulation, vibration reduction and building protection).

For our customers this means absolutely flexible product innovation as well as a wide range of already existing rubber compound products shipped from various locations at exceptional prices and consistent high quality.

◆ RUBBER MULCH

Our **EcoScape®** rubber mulch is the premier choice for the market of landscape and playground **rubber mulch**.

EcoScape® rubber mulch does not compact, and therefore it is not necessary to keep topping it up. It simply saves time and energy, and whatever the application, **EcoScape®** rubber mulch is a truly cost effective solution.

Made from 100% recycled rubber, **EcoScape®** rubber mulch is also a really environmentally friendly solution, whilst combining many advantages including excellent impact absorption characteristics (EN 1177 certification) and non-toxicity.

In addition, **EcoScape®** rubber mulch does not retain water, dries quickly and is available in a variety of durable colours.

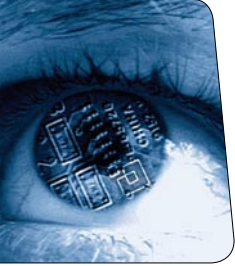

◆ RENEWABLE ENERGY AND BIODIESEL

Our **RENEWABLE ENERGY AND BIODIESEL BUSINESS** activities include raw material and final products trading, full assistance in the supply of technology and development of biofuel projects as well as a wide range of additional services in this field.

For our customers this guarantees best terms for product supply and sales, as well as background information on the renewable energy and biodiesel market, its inherent potentials, challenges and critical factors.

With our experience and knowledge in every aspect of waste tyre collection, recycling & disposal, we are consulting companies interested in the tyre and industrial rubber recycling industry to learn more about the market, the industry potentials and the critical factors required to succeed in a rapidly expanding industry.

For our customers this means in-depth industry know-how, unbiased specialist information, ongoing co-operation possibilities and, ultimately, business venture sustainability.

Our mission is to become a **global innovator** and a **contributor to ecologically sustainable and profitable product cycles** through the conception, design, manufacture and distribution of environmentally safe products based on renewable raw materials.

We strive to **inspire our customers** and **exceed expectations!**
