EcoScape is made from carefully selected recycled rubber shreds to provide a loose top surface. It provides an attractive, versatile and almost maintenance free solution to a wide variety of applications: Call our helpline for advice on depth, coverage rates and prices for your particular project: our advice is always free.

- ~ Long lasting decorative colours ~ Helps to curb weeds, mould and fungus ~ Will not float or wash away ~ Free draining for retained soil moisture
- ~ Does not absorb valuable nutrients ~ Usually a once only application ~ 100% non toxic ~ No possibility of leaching carbon or other chemicals
- ~ Totally safe to use with other garden sprays and chemicals ~ Available in bonded form for tree protection, edging and pathways

PLAYSCAPES

FEATURES

- Does not absorb moisture
- Does not dry out in fine weather
- Bonded colouring process
- Heavier than wood / bark material
- Inorganic material
- Does not compact or degrade
- Greater impact absorbency
- The EcoScape brand

ADVANTAGES

- Material dries quickly
- Does not splinter or become harsh to walk on; Does not get dusty
- Does not break down into smaller pieces
- Does not rub off; UV stable
- Does not float; Minimal movement in wind/adverse weather
- Unattractive to pets and wildlife; Rain will normally keep it clean but can be hosed down if needed; Falling debris from surrounding trees can be easily removed
- No need to overcompensate for expected loss; Does not need topping up; Does not need replacing
- Can use less material; Less ground preparation
- Guaranteed to be metal and fibre free; Tested and approved to EN1177; Sealed in colouring process; Fire resistant; 100% non toxic

BENEFITS

- All year round use
- Comfortable to walk on – without shoes if preferred; Does not easily blow around; No scrapes, scratches or splinters
- Long lasting aesthetics; Does not stain skin or clothes
- Minimal maintenance – Unlikely to scatter easily
- Minimises risk of animal soiling; Does not encourage organic growth
- Saves money; Can consider reducing the initial depth needed
- No maintenance program needed; No risk of variable safety performance between top ups;
- Easier/ cheaper to install
- Approved for formal safety use in public areas
- Consistent safety performance regardless of weather conditions
